ACRONYMS, ABBREVIATIONS, AND DEFINITIONS

AASHTO	American Association of State Highway and Transportation Officials
CFR	Code of Federal Regulations
dBA	A-weighted decibel
FHWA	Federal Highway Administration
L_{eq}	equivalent steady-state noise level, which in a stated period of time would contain the same acoustical energy as the time-varying noise level during the same period
$L_{eq}(h)$	energy-average of the A-weighted noise levels occurring during a 1-hour period
LOS	Level of Service
Noise	unwanted sound
NAC	Noise Abatement Criteria
Receptor	A discrete or representative location of a noise sensitive area(s)
TNM	Traffic Noise Model
UDOT	Utah Department of Transportation

NOISE STUDY

1.0 INTRODUCTION

This Noise Analysis was prepared in accordance with the Utah Department of Transportation (UDOT) Noise Abatement Policy (UDOT 2020) and is consistent with 23 Code of Federal Regulations (CFR) 772 and Utah Administrative Code R930-3.

2.0 DESCRIPTION OF PROJECT

The Utah Department of Transportation (UDOT) has initiated an Environmental Impact Statement (EIS) for the Interstate 15 (I-15): Farmington to Salt Lake City project. The Action Alternative includes five general-purpose lanes and one high-occupancy/toll lane on mainline I-15 combined with the following concepts (see Chapter 2 of the EIS for concept summaries):

- Farmington 400 West Option
- Farmington State Street Option
- Salt Lake City 1000 North - Northern Option
- Salt Lake City 1000 North - Southern Option

The Action Alternative would have numerous cross streets and would require various cross street configurations: interchanges, overpasses, underpasses, and cul-de-sacs. The study area is comprised of an area along I-15 from the US-89 Interchange in Farmington to the north and the 400 South interchange in Salt Lake City to the south. The study area is approximately 16 miles in length and includes numerous east-west segments along 400 West and State Street in Farmington, 400 North and 500 South in Bountiful, and 1000 North in Salt Lake City.

For this analysis, the noise study area is defined as the land adjacent to I-15 between the US-89 and 400 South interchanges, and east-west cross-streets that would be affected by an increase in noise levels (see Figure 1). Two options were evaluated as part of this noise study. These options will be referred to as the Northern Option and the Southern Option.

The Northern Option includes the Farmington State Street Option and the Salt Lake City 1000 North - Northern Option.

The Southern Option includes the Farmington 400 West Option and the Salt Lake City 1000 North - Southern Option.

2.1 Applicability

The UDOT Noise Abatement Policy states that “noise abatement will be considered for all Type I projects where noise impacts are identified.” Type I projects are projects that include any of the following: the construction of a highway at a new location; the physical alteration of an existing highway that substantially alters its alignment; the addition of a through traffic lane; the addition of an auxiliary lane; the addition or relocation of interchange lanes or ramps; or the addition or substantial alteration of a weigh station, rest stop, ride share lot, or toll plaza. This project is

Figure 1: Noise Study Area

considered a Type I project because of the substantial horizontal and/or vertical alteration of an existing highway, the addition of through-traffic lanes, and the relocation of interchange ramps.

3.0 ANALYSIS OF TRAFFIC NOISE IMPACTS

Traffic noise is measured in A-weighted sound levels in decibels (dBA), which most closely approximates the way the human ear hears sounds at different frequencies (see Figure 2). Since traffic noise varies over time, the sound levels for this noise analysis are expressed as “equivalent levels” or L_{eq} , representing the average sound level over a 1-hour period of time. Unless noted otherwise, all sound levels in this noise analysis are expressed in the hourly equivalent noise level.

3.1 Noise Abatement Criteria

The Federal Highway Administration (FHWA) has established Noise Abatement Criteria for several categories of land use activities (see Table 1). FHWA’s noise criteria is based on sound levels that are considered to be an impact to nearby noise sensitive areas, also known as receptors. Primary consideration for noise abatement is to be given for exterior areas where frequent human use occurs.

UDOT has developed a Noise Abatement Policy for transportation projects, which conforms to FHWA noise abatement requirements outlined in 23 CFR §772.

UDOT’s Noise Abatement Criteria is the noise decibel (dBA) value reflecting the approach criteria of 1 dBA below the Noise Abatement Criteria values listed in 23 CFR §772 for each land use category (see Table 1).

UDOT’s Noise Abatement Policy states that a traffic noise impact occurs when either 1) the future worst case noise level is equal to or greater than the UDOT Noise Abatement Criteria for specified land use categories or 2) the future worst case noise level is greater than or equal to an increase of 10 dBA over the existing noise level.

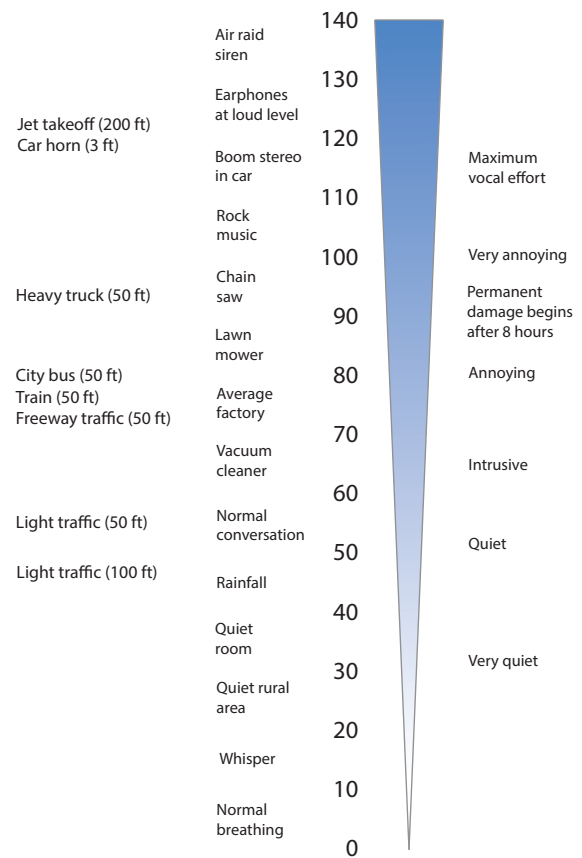

Figure 2: Sound Levels (in dBA) of Common Sounds (Compiled from Federal Transit Administration and Environmental Protection Agency Data)

Noise impact and abatement analyses are required within Land Use Activity Categories A, B, C, D, and E (see Table 1) only when development exists or has been permitted (formal building permit issued prior to the date the final environmental decision document is approved). Activity Categories

F and G include lands that are not sensitive to traffic noise. There are no impact criteria for these land use types, and an analysis of noise impacts is not required.

For the purposes of this noise analysis, aerial photography and on-site visits were used to identify existing land uses and structure locations.

Table 1: Noise Abatement Criteria

Activity Category	FHWA Criteria $L_{eq}(h)$	UDOT Criteria $L_{eq}(h)$	Evaluation Location	Activity Description
A	57	56	Exterior	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.
B	67	66	Exterior	Residential.
C	67	66	Exterior	Active sports areas, amphitheatres, auditoriums, campgrounds, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4(f) sites, schools, television studios, trails, and trail crossings.
D	52	51	Interior	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools, and television studios.
E	72	71	Exterior	Hotels, motels, offices, restaurants/bars, and other developed lands, properties or activities not included in A-D or F.
F	---	---	---	Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, manufacturing, mining, rail yards, retail facilities, shipyards, utilities (water resources, water treatment, electrical), and warehousing.
G	---	---	---	Undeveloped lands that are not permitted.

F	<ul style="list-style-type: none"> • Agricultural land • Bus yard • Industrial • Maintenance facilities • Manufacturing • Rail yard • Retail facilities • Warehousing
G	<ul style="list-style-type: none"> • Undeveloped land within the study area

The UDOT Noise Abatement Policy states that a noise impact analysis will not be required for Activity Categories F and G. However, for Activity Category G, an estimate of the distance to the approach criteria must be provided to local governments. See Section 6 of this noise study for additional information.

3.3 Noise Measurements

On-site measurements were taken from November 12 to November 19, 2021 with an Extech Instruments 407780A Type II integrating sound level meter for a duration of 20 minutes at the locations listed in Table 3 (see Attachment A for data sheets and noise measurement locations). Recorded measurements were used to validate the noise model and to ensure it is representative of existing conditions. Per FHWA guidance, the purpose of these measurements is not to define the existing noise levels for impact determination, but to allow validation of the existing model run so that the noise model can then be used with some degree of confidence to predict the existing worst noise hour levels that will be used in impact determination. To be considered valid, the field noise measurements must be within 3 dBA of the model's predicted noise. Several noise measurement locations were beyond the final noise study area and were not used in validation. These locations are noted with an asterisk in Table 3. The model validation results range between 1 and 3 dBA. The field noise measurements were within 3 dBA of the model's predicted noise level, and the model is considered valid (see Table 3).

* Denotes measurement location beyond the final noise study area or not needed for validation.

^ A 17-foot tall noise wall is currently under construction in this area as part of the West Davis Connector project that is not included in the validation model.

3.4 Existing Noise

The primary source of noise in the study area is automobile and truck traffic from I-15, Legacy Highway, State Street, Glovers Lane, Parrish Lane, 400 North, 500 South, 2600 South, I-215, 1000 North, 600 North, I-80, 400 South, and other roadways in the area.

Existing noise levels were established via noise modeling for receptors located adjacent to I-15 and major cross streets within the study area. Existing traffic sound levels for receptors in this area were calculated with the FHWA Traffic Noise Model (TNM) 2.5 software using existing conditions (travel lane configurations and the posted speed limit). To be consistent with the UDOT Noise

Abatement Policy, level of service (LOS) C traffic volumes were used to determine the greatest hourly traffic noise conditions likely to occur on a regular basis.

LOS C traffic volumes and truck percentages were taken from the traffic study conducted as part of the this project (see Table 4).

Table 4: Existing Roadway Capacity Estimates

Roadway	Type	Medium Trucks (%)	Heavy Trucks (%)
I-15	10-lane suburban freeway	5-6	4-6
Legacy Parkway	4-lane suburban freeway	5-6	4-6
State Street	2-lane suburban arterial	4	2
Glovers Lane	2-lane suburban arterial	4	2
Parrish Lane	4-lane suburban arterial	4	2
400 North	4-lane suburban arterial	4	2
500 South	4-lane suburban arterial	4	2
2600 South	4-lane suburban arterial	4	2
I-215	4-lane suburban freeway	5-6	4-6
1000 North	2-lane suburban arterial	4	2
600 North	4-lane suburban arterial	4	2
I-80	6-lane suburban freeway	5-6	4-6
400 South	6-lane suburban arterial	4	2

There are existing 6- to 17-foot-tall concrete noise walls adjacent to the edge of pavement along I-15 within the study area. These walls have been included in the existing model.

3.5 Action Alternative Noise

Projected traffic noise levels for the Action Alternative were calculated with TNM 2.5 software using build conditions (travel lane configurations and traffic volumes). LOS C traffic volumes for I-15 (including interchange ramps) and other major roadways within the study area were taken from the traffic study conducted as part of this project (see Table 5).

Table 5: Action Alternative Roadway Capacity Estimates

Roadway	Type	Medium Trucks (%)	Heavy Trucks (%)
I-15	12-lane suburban freeway	5-6	4-6
Legacy Parkway	4-lane suburban freeway	5-6	4-6
State Street	2-lane suburban arterial	4	2

Roadway	Type	Medium Trucks (%)	Heavy Trucks (%)
Glovers Lane	2-lane suburban arterial	4	2
Parrish Lane	4-lane suburban arterial	4	2
400 North	4-lane suburban arterial	4	2
500 South	4-lane suburban arterial	4	2
2600 South	4-lane suburban arterial	4	2
I-215	4-lane suburban freeway	5-6	4-6
1000 North	2-lane suburban arterial	4	2
600 North	4-lane suburban arterial	4	2
I-80	6-lane suburban freeway	5-6	4-6
400 South	6-lane suburban arterial	4	2

Northern Option

Overall, exterior noise levels for the Northern Option would range from 47 dBA to 86 dBA compared to 47 dBA and 81 dBA for the existing conditions (see the Build Noise Impacts - Northern Option maps in Attachment C).

Of the 5,219 receivers, 3,284 would be impacted, including 3,163 residential locations, 5 indoor facilities, 102 recreational locations, and 14 businesses (see the Build Noise Impacts - Northern Option maps in Attachment C). These impacts occur at predominantly residential locations east and west of the Action Alternative, with several outdoor recreation locations also experiencing impacts.

Southern Option

Overall, exterior noise levels for the Southern Option would range from 47 dBA to 86 dBA compared to 45 dBA and 81 dBA for the existing conditions (see the Build Noise Impacts - Southern Option maps in Attachment C).

Of the 5,219 receivers, 3,280 would be impacted, including 3,155 residential locations, 5 indoor facilities, 106 recreational locations, and 14 businesses (see the Build Noise Impacts - Southern Option maps in Attachment C). These impacts occur at predominantly residential locations east and west of the Action Alternative, with several outdoor recreation locations also experiencing impacts.

3.6 Existing and Action Alternative Summary

Increases in noise levels under the Action Alternative are a result of the expanded footprint of I-15 and the Action Alternative's removal of most existing noise walls within the study area. The Action Alternative did not assume replacing any impacted noise walls as part of the impact analysis. Section 4.0 discusses the evaluation of replacement noise walls and new noise walls. See Attachment B for a summary of existing and build noise levels for the Action Alternative. Refer to the maps in Attachment C for receiver locations.

4.0 NOISE ABATEMENT

According to the UDOT Noise Abatement Policy, specific conditions must be met before traffic noise abatement is implemented. Noise abatement must be considered feasible and reasonable. The factors considered when determining if abatement is feasible include:

- **Engineering Considerations:** Engineering considerations such as safety, presence of cross streets, sight distance, access to adjacent properties, wall height, topography, drainage, utilities, maintenance access, and maintenance of the abatement measure must be taken into account as part of establishing feasibility. Noise abatement measures are not intended to serve as privacy fences or safety barriers. Abatement measures installed on structures will not exceed 10-feet in height measured from the top of deck or roadway to the top of the noise wall. Noise walls will not be installed on structures that require retrofitting to accommodate the noise abatement measure. Noise abatement measures will be considered if the project meets the criteria established in this policy if structure replacement is included as part of the project. Abatement measures shall be consistent with general American Association of State Highway and Transportation Officials (AASHTO) design principles.
- **Safety on Urban Non-Access Controlled Roadways:** To avoid a damaged barrier from becoming a safety hazard, in the event of a failure, barrier height shall be no greater than the distance from the back-of-curb to the face of proposed barrier. Because the distance from the back-of-curb to the face of a proposed barrier varies, barrier heights which meet this safety requirement may also vary.
- **Acoustic Feasibility:** Noise abatement must be considered "acoustically feasible." This is defined as achieving at least a 5 dBA highway traffic noise reduction for at least 50% of front-row receptors.

The factors considered when determining if mitigation is reasonable include:

- **Noise Abatement Design Goal:** Every reasonable effort should be made to obtain substantial noise reductions. UDOT defines the minimum noise reduction (design goal) from proposed abatement measures to be 7 dBA or greater for at least 35% of front-row receptors.

- **Cost Effectiveness:** The cost of noise abatement measures must be deemed reasonable in order to be included in the project. Noise abatement costs are based on a fixed unit cost of \$20 per square foot, multiplied by the height and length of the wall, in addition to the cost of any other item associated with the abatement measure that is critical to safety. The fixed unit cost is based on the historical average cost of noise walls installed on UDOT projects and is reviewed at regular intervals, not to exceed five years. The cost effectiveness of abatement is determined by analyzing the cost of a wall that would provide a noise reduction of 5 dBA or more for a benefited receptor. A reasonable cost is considered to be a maximum of \$30,000 per benefited receptor for Activity Category B and \$360 per linear foot for Activity Categories A, C, D, or E. If the anticipated cost of the noise abatement measure is less than the allowable cost, then the abatement is deemed reasonable.
- **Viewpoints of Property Owners and Residents:** As part of the final design phase, public balloting would take place if noise abatement measures appear to meet the criteria outlined in UDOT's Noise Abatement Policy.

4.1 Noise Barriers

For a noise barrier to be effective, it must be high enough and long enough to block the view of the noise source from the receptor's perspective. The FHWA's *Highway Traffic Noise: Analysis and Abatement Guidance* states that a good rule of thumb is that the noise barrier should extend four times as far in each direction as the distance from the receptor to the barrier. For instance, if the receptor is 50 feet from the proposed noise barrier, the barrier needs to extend at least 200 feet on either side of the receptor in order to shield the receptor from noise traveling past the ends of the barrier.

The anticipated cost of each wall was calculated by multiplying the wall area and the wall cost per square foot (\$20). The allowable cost was calculated using two variables: 1) Activity Category B allowable cost and, 2) Activity Category C allowable cost. The Activity Category B allowable cost was calculated by multiplying the allowable cost per benefited receptor (\$30,000) by the number of receptors benefited by the wall. The Activity Category C allowable cost was calculated by multiplying the length of the wall associated with Activity Category C land use by the allowable cost for Activity Category C land (\$360 per linear foot). These two variables, Activity Category B allowable cost and Activity Category C allowable cost, were combined to produce the allowable cost for each wall (see Attachment E for detailed wall analyses).

In an effort to provide an objective analysis of traffic noise reduction to impacted receptors, a variety of noise wall heights were considered. If multiple wall heights meet noise abatement requirements, the shortest wall height found to be both feasible and reasonable would be recommended for balloting.

Noise barriers were considered for most impacted receptors. Openings in noise barriers for driveway and cross street access greatly reduce the effectiveness of noise barriers. Therefore, impacted receptors with direct access onto local streets do not qualify for noise barriers. Due to

access for residents and businesses along the cross-streets, impacted receptors in these locations were not evaluated for mitigation (see Attachment C for locations of impacted receptors).

UDOT evaluated 21 noise barriers at locations where noise impacts would occur with the Action Alternative (see Table 6). Eight of the 21 noise barriers were new noise barriers, and 13 of the 21 noise barriers were replacement noise barriers consistent with the UDOT Noise Abatement Policy. Three of the 8 new noise barriers met the requirements of the UDOT Noise Abatement Policy. Maps showing the locations of the noise walls evaluated for the Action Alternative are located in Attachment D. More detailed information is available for each barrier in Attachment E.

Noise barriers shown in this analysis include replacement noise barriers for areas with existing noise walls and new or extended noise walls for locations modeled to have noise impacts from the Action Alternative. Analyses for areas with existing noise walls were evaluated beginning with the tallest existing noise wall height. The final height for replacement noise barriers would be at least equal to the existing height. The new noise barriers are preliminary and must meet the feasibility and reasonableness requirements of the UDOT Noise Abatement Policy.

The final lengths and heights for any of the noise barriers identified in the environmental study phase are still subject to final design and the feasibility and reasonable criteria as defined in the UDOT Noise Abatement Policy. UDOT would not make a decision whether to construct the proposed noise barrier until the project design is completed and refined utility relocation and right-of-way costs are available. Reasonableness would be evaluated using refined costs based on the final design.

UDOT will conduct balloting for the proposed noise abatement measures with the final design engineering considerations and costs that meet the feasibility criteria and reasonable design goal and cost-effectiveness criteria as defined in the UDOT Noise Abatement Policy.

Table 6: Barrier Analysis Summary

Evaluated Wall	Options	New Barrier or Replacement of Existing Barrier?	Is Barrier Feasible, Reasonable, and Recommended for Balloting (applicable to new walls only)	Recommended Barrier Height (feet)*
1	Both Options	New	No	N/A
2	Both Options	New	Yes	16/10
3	Both Options	New	No	N/A
4	Both Options	Replacement	Yes	16
5	Both Options	Replacement	Yes	17
6	Both Options	Replace in-kind	N/A	16

19	Both Options	Replacement	Yes	16
20	Both Options	Replacement	Yes	14
21	Both Options	Replace in-kind	N/A	14

* A single number indicates the same height under the Northern and Southern Options. Two numbers indicate differences in height between the Northern and Southern Options, respectively.

4.2 Action Alternative Barrier Analysis

Wall 1

Northern Option

Wall 1 would be located on the east side of I-15. The wall would extend approximately 1,313 feet between US-89 and State Street in Farmington (see Noise Wall maps in Attachment D). Wall 1 was evaluated to mitigate noise for 16 impacted receivers (representing 16 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 7, walls ranging in height from 10 to 16 feet were evaluated (see Attachment E for detailed barrier analyses). Several different lengths were evaluated for this location and the wall with the best performance is detailed below.

Table 7: Summary of Wall 1 - Northern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	0	No	N/A	N/A	N/A	N/A	N/A	No
12	29	No	N/A	N/A	N/A	N/A	N/A	No
14	43	No	N/A	N/A	N/A	N/A	N/A	No
16	57	Yes	14	No	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 10 to 14 feet are not acoustically feasible. A wall 16 feet in height is acoustically feasible, however it does not meet the noise abatement design goal. Therefore, a wall 1,313 feet in length at this location is not reasonable and is not recommended for balloting.

Southern Option

Wall 1 would be located on the east side of I-15. The wall would extend approximately 1,300 feet between US-89 and State Street in Farmington (see Noise Wall maps in Attachment D). Wall 1 was evaluated to mitigate noise for 16 impacted receivers (representing 16 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 8, walls ranging in height from 10 to 16 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 8: Summary of Wall 1 - Southern Option

Barrier Height	Feasible		Reasonable					Is Barrier Feasible & Reasonable?
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost	Cost Effective? ³	
10	0	No	N/A	N/A	N/A	N/A	N/A	No
14	0	No	N/A	N/A	N/A	N/A	N/A	No
16	0	No	N/A	N/A	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 10 to 16 feet are not acoustically feasible. Therefore, a wall 1,300 feet in length at this location is not feasible and is not recommended for balloting.

Wall 2*Northern Option*

Wall 2 would be located on the west side of the frontage road. The wall would extend approximately 1,651 feet between State Street and 200 South in Farmington (see Noise Wall maps in Attachment D). Wall 2 was evaluated to mitigate noise for 15 impacted receivers (representing 15 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 9, walls ranging in height from 10 to 16 feet were evaluated (see Attachment E for detailed barrier analyses). Several different lengths were evaluated for this location and the wall with the best performance is detailed below.

Table 9: Summary of Wall 2 - Northern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	20	No	N/A	N/A	N/A	N/A	N/A	No
12	60	Yes	0	No	N/A	N/A	N/A	No
14	100	Yes	20	No	N/A	N/A	N/A	No
16	100	Yes	80	Yes	\$528,320	\$602,400	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 10 feet in height is not acoustically feasible. Walls ranging in height from 12 to 14 feet are acoustically feasible, however they do not meet the noise abatement design goal. A wall 16 feet in height is acoustically feasible, meets the noise abatement design goal and is cost reasonable. Therefore, a 16-foot tall wall for Wall 2 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Southern Option

Wall 2 would be located on the east side of the frontage road. The wall would extend approximately 1,704 feet between State Street and 200 South in Farmington (see Noise Wall maps in Attachment D). Wall 2 was evaluated to mitigate noise for 17 impacted receivers (representing 17 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 10, walls ranging in height from 10 to 16 feet were evaluated (see Attachment E for detailed barrier analyses). Several different lengths were evaluated for this location and the wall with the best performance is detailed below.

Table 10: Summary of Wall 2 - Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	60	Yes	60	Yes	\$280,000	\$392,400	Yes	Yes
12	60	Yes	60	Yes	\$336,000	\$452,400	Yes	Yes
14	100	Yes	60	Yes	\$392,000	\$542,400	Yes	Yes
16	100	Yes	80	Yes	\$448,000	\$542,400	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 10 to 16 feet are acoustically feasible, meet the noise abatement design goal and are cost reasonable. Therefore, a 10-foot tall wall for Wall 2 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 3**Northern and Southern Option**

Wall 3 would be located on the east side of I-15. The wall would be comprised of four segments and would extend approximately 3,970 feet between State Street and just south of Glovers Lane in Farmington (see Noise Wall maps in Attachment D). This analysis assumes that the 17-foot wall south of Glovers Lane that is being constructed as part of the West Davis Corridor project would remain in its current location. Wall 3 was evaluated to mitigate noise for 43 impacted receivers (representing 43 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 11, walls ranging in height from 10 to 16 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 11: Summary of Wall 3 - Northern and Southern Option

Barrier Height	Feasible		Reasonable					Is Barrier Feasible & Reasonable?
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost	Cost Effective? ³	
10	0	No	N/A	N/A	N/A	N/A	N/A	No
12	0	No	N/A	N/A	N/A	N/A	N/A	No
14	0	No	N/A	N/A	N/A	N/A	N/A	No
16	3	No	N/A	N/A	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 10 to 16 feet are not acoustically feasible. Therefore, a wall 3,970 feet in length at this location is not feasible and is not recommended for balloting. If portions of the existing wall south of the evaluated wall were to be removed in final design, those segments would be replaced at the existing height of 17 feet.

Wall 4**Northern and Southern Option**

Wall 4 would be located on the east side of I-15. The wall would extend approximately 4,199 feet between Glovers Lane and 1600 South in Farmington (see Noise Wall maps in Attachment D). This analysis assumes that the 17-foot wall south of Glovers Lane that is being constructed as part of the West Davis Corridor project would remain in its current location but was removed from the model to evaluate the worst case scenario under final design. The existing 5-foot tall noise wall was removed from the model. The length of the evaluated wall was extended north beyond the limits of the existing noise wall to account for all impacted receptors in the area. Wall 4 was evaluated to mitigate noise for 55 impacted receivers (representing 62 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 12, walls ranging in height from 10 to 16 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 12: Summary of Wall 4 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	0	No	N/A	N/A	N/A	N/A	N/A	No
12	50	Yes	0	No	N/A	N/A	N/A	No
14	86	Yes	14	No	N/A	N/A	N/A	No
16	86	Yes	54	Yes	\$1,343,680	\$1,656,000	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 10 feet in height is not acoustically feasible. Walls ranging in height from 12 to 14 feet are acoustically feasible, however they do not meet the noise abatement design goal. A wall 16 feet in height is acoustically feasible, meets the noise abatement design goal, and is cost reasonable. Therefore, a 16-foot tall wall for Wall 4 is recommended for balloting in locations of the existing 5-foot-tall noise wall and the extension to the north because it is the shortest wall height found to be both feasible and reasonable. If portions of the existing 17-foot-tall wall to the south were to be removed in final design, those segments would be replaced at the existing height of 17 feet. Per the UDOT Noise Abatement Policy, no balloting would occur for this replacement.

Wall 5*Northern and Southern Option*

Wall 5 would be located on the east side of I-15. The wall would extend approximately 12,345 feet between 1600 South in Farmington and Parrish Lane in Centerville (see Noise Wall maps in Attachment D). This analysis assumes that the 17-foot wall south of Glovers Lane that is being constructed as part of the West Davis Corridor project would remain in its current location but was removed from the model to evaluate the worst case scenario under final design. Wall 5 was evaluated to mitigate noise for 223 impacted receivers (representing 243 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 13, a wall 17 feet in height was evaluated as that was the tallest height of the existing noise wall impacted by the Action Alternative (see Attachment E for detailed barrier analyses).

Table 13: Summary of Wall 5 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
17	98	Yes	91	Yes	\$4,197,300	\$7,705,800	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 17 feet in height is acoustically feasible, meets the noise abatement design goal and is cost reasonable. Therefore, a 17-foot tall wall for Wall 5 is recommended for balloting because it is both feasible and reasonable. If portions of the existing 17-foot-tall wall to the north were to be removed in final design, those segments would be replaced at the existing height of 17 feet. Per the UDOT Noise Abatement Policy, no balloting would occur for this replacement.

Wall 6*Northern and Southern Option*

Wall 6 would be located on the east side of I-15. The wall would extend approximately 4,481 feet from just north of Pages Lane in Centerville to 1000 North in Bountiful (see Noise Wall maps in Attachment D). This analysis assumes that the existing 16-foot wall would be removed from its current location by the Action Alternative. The length of the evaluated wall was extended beyond the limits of the existing noise wall to account for all impacted receptors in the area. Wall 6 was evaluated to mitigate noise for 68 impacted receivers (representing 106 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 14, walls ranging in height from 16 to 17 feet were evaluated (see Attachment E for detailed barrier analyses). Several different lengths were evaluated for this location and the wall with the best performance is detailed below.

Table 14: Summary of Wall 6 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
16	58	Yes	3	No	N/A	N/A	N/A	No
17	59	Yes	3	No	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 16 to 17 feet are acoustically feasible, however they do not meet the noise abatement design goal. While walls ranging in height from 16 to 17 feet are not considered feasible and reasonable, a 16-foot-tall wall is recommended to be replaced “in-kind”, consistent with the UDOT Noise Abatement Policy.

Wall 7**Northern and Southern Option**

Wall 7 would be located on the east side of I-15. The wall would extend approximately 986 feet north of 400 North in West Bountiful (see Noise Wall maps in Attachment D). This analysis assumes that the existing 13-foot wall would be removed from its current location by the Action Alternative. Wall 7 was evaluated to mitigate noise for 15 impacted receivers (representing 15 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 15, walls ranging in height from 13 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 15: Summary of Wall 7 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
13	100	Yes	67	Yes	\$256,360	\$180,000	No	No
14	100	Yes	100	Yes	\$276,080	\$240,000	No	No
15	100	Yes	100	Yes	\$295,800	\$270,000	No	No
16	100	Yes	100	Yes	\$315,520	\$270,000	No	No
17	100	Yes	100	Yes	\$335,240	\$270,000	No	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 13 to 17 feet are acoustically feasible and meet the noise abatement design goal, however they are not cost reasonable. While walls ranging in height from 13 to 17 feet are not considered feasible and reasonable, a 13-foot-tall wall is recommended to be replaced “in-kind”, consistent with the UDOT Noise Abatement Policy.

Wall 8*Northern and Southern Option*

Wall 8 would be located on the west side of I-15. The wall would be built in two segments and extend approximately 8,780 feet between Parrish Lane in Centerville and 400 North in West Bountiful (see Noise Wall maps in Attachment D). Wall 8 was evaluated to mitigate noise for 49 impacted receivers (representing 53 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 16, walls ranging in height from 10 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 16: Summary of Wall 8 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	0	No	N/A	N/A	N/A	N/A	N/A	No
12	2	No	N/A	N/A	N/A	N/A	N/A	No
14	25	No	N/A	N/A	N/A	N/A	N/A	No
16	54	Yes	2	No	N/A	N/A	N/A	No
17	73	Yes	3	No	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 10 to 14 feet are not acoustically feasible. Walls ranging in height from 16 to 17 feet are acoustically feasible, however they do not meet the noise abatement design goal. Therefore, a wall 8,780 feet in length at this location is not reasonable and is not recommended for balloting.

Wall 9*Northern and Southern Option*

Wall 9 would be located on the west side of I-15. The wall would extend approximately 2,235 feet between 400 North and 500 South in West Bountiful (see Noise Wall maps in Attachment D). Wall 9 was evaluated to mitigate noise for 46 impacted receivers (representing 46 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 17, walls ranging in height from 10 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 17: Summary of Wall 9 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	0	No	N/A	N/A	N/A	N/A	N/A	No
12	0	No	N/A	N/A	N/A	N/A	N/A	No
14	0	No	N/A	N/A	N/A	N/A	N/A	No
16	11	No	N/A	N/A	N/A	N/A	N/A	No
17	11	No	N/A	N/A	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 10 to 17 feet are not acoustically feasible. Therefore, a wall 2,235 feet in length at this location is not feasible and is not recommended for balloting.

Wall 10

Wall 10 would be located on the west side of I-15. The wall would extend approximately 3,381 feet between 700 South and 1500 South in Bountiful (see Noise Wall maps in Attachment D). This analysis assumes that the existing 12-foot wall would be removed from its current location by the Action Alternative. Wall 10 was evaluated to mitigate noise for 63 impacted receivers (representing 69 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 18, walls ranging in height from 12 to 16 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 18: Summary of Wall 10 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
12	75	Yes	29	No	N/A	N/A	N/A	No
13	86	Yes	39	Yes	\$879,060	\$1,134,600	Yes	Yes
14	89	Yes	46	Yes	\$946,680	\$1,254,600	Yes	Yes
16	96	Yes	57	Yes	\$1,081,920	\$1,584,600	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 12 feet in height is acoustically feasible, however it does not meet the noise abatement design goal. Walls ranging in height from 13 to 16 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 13-foot-tall wall for Wall 10 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 11*Northern and Southern Option*

Wall 11 would be located on the east side of I-15. The wall would extend approximately 1,880 feet between 1000 South and 1500 South in Bountiful (see Noise Wall maps in Attachment D). This analysis assumes that the existing 14-foot wall would be removed from its current location by the Action Alternative. Wall 11 was evaluated to mitigate noise for 22 impacted receivers (representing 45 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 19, walls ranging in height from 14 to 16 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 19: Summary of Wall 11 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
14	56	Yes	56	Yes	\$526,400	\$958,200	Yes	Yes
15	94	Yes	56	Yes	\$564,000	\$1,258,200	Yes	Yes
16	94	Yes	56	Yes	\$601,600	\$1,258,200	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 14 to 16 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 14-foot-tall wall for Wall 11 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 12*Northern and Southern Option*

Wall 12 would be located on the west side of I-15. The wall would extend approximately 4,343 feet between 1500 South and 2500 South in Woods Cross (see Noise Wall maps in Attachment D). This analysis assumes that the existing 12-foot walls would be removed from their current locations by the Action Alternative. Wall 12 was evaluated to mitigate noise for 154 impacted receivers (representing 154 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 20, walls ranging in height from 12 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 20: Summary of Wall 12 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
12	80	Yes	67	Yes	\$1,042,320	\$2,010,000	Yes	Yes
13	87	Yes	72	Yes	\$1,129,180	\$2,250,000	Yes	Yes
14	87	Yes	72	Yes	\$1,216,040	\$2,310,000	Yes	Yes
15	87	Yes	76	Yes	\$1,302,900	\$2,370,000	Yes	Yes
16	87	Yes	78	Yes	\$1,389,760	\$2,610,000	Yes	Yes
17	87	Yes	78	Yes	\$1,476,620	\$2,700,000	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 12 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 12-foot-tall wall for Wall 12 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 13*Northern and Southern Option*

Wall 13 would be located on the east side of I-15. The wall would extend approximately 1,370 feet between 1500 South and 1950 South in Woods Cross (see Noise Wall maps in Attachment D). This analysis assumes that the existing 12-foot and 14-foot walls would be removed from their current locations by the Action Alternative. Wall 13 was evaluated to mitigate noise for 41 impacted receivers (representing 41 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 21, walls ranging in height from 14 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 21: Summary of Wall 13 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
14	80	Yes	80	Yes	\$383,600	\$570,000	Yes	Yes
15	80	Yes	80	Yes	\$411,000	\$600,000	Yes	Yes
16	80	Yes	80	Yes	\$438,400	\$630,000	Yes	Yes
17	80	Yes	80	Yes	\$465,800	\$630,000	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 14 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 14-foot-tall wall for Wall 13 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 14*Northern and Southern Option*

Wall 14 would be located on the east side of I-15. The wall would extend approximately 1,557 feet between 2000 South and 2300 South (see Noise Wall maps in Attachment D). Wall 14 was evaluated to mitigate noise for six impacted receivers (representing six receptors or dwelling units) associated with Woods Cross High on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 22, walls ranging in height from 14 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 22: Summary of Wall 14 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
14	80	Yes	0	No	N/A	N/A	N/A	No
15	80	Yes	40	Yes	\$467,154	\$560,585	Yes	Yes
16	80	Yes	40	Yes	\$498,298	\$560,585	Yes	Yes
17	80	Yes	60	Yes	\$529,441	\$560,585	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 14 feet in height is acoustically feasible, however it does not meet the noise abatement design goal. Walls ranging in height from 15 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 15-foot tall wall for Wall 14 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 15*Northern and Southern Option*

Wall 15 would be located on the west side of I-15. The wall would extend approximately 626 feet between 2600 South/1100 North and 900 North in North Salt Lake (see Noise Wall maps in Attachment D). Wall 15 was evaluated to mitigate noise for 105 impacted receivers (representing 105 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 23, a wall 17 feet in height was evaluated (see Attachment E for detailed barrier analyses).

Table 23: Summary of Wall 15 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
17	56	Yes	17	No	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 17 feet in height is acoustically feasible, however it does not meet the noise abatement design goal. Therefore, a wall 626 feet in this location is not recommended for balloting.

Wall 16*Northern and Southern Option*

Wall 16 would be located on the west side of I-15. The wall would extend approximately 650 feet north of Main Street in North Salt Lake (see Noise Wall maps in Attachment D). Wall 16 was evaluated to mitigate noise for 10 impacted receivers (representing 10 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 24, walls ranging in height from 10 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 24: Summary of Wall 16 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
10	67	Yes	0	No	N/A	N/A	N/A	No
11	67	Yes	67	Yes	\$143,000	\$150,000	Yes	Yes
12	67	Yes	67	Yes	\$156,000	\$150,000	No	No
13	67	Yes	67	Yes	\$169,000	\$150,000	No	No
14	67	Yes	67	Yes	\$182,000	\$150,000	No	No
15	67	Yes	67	Yes	\$195,000	\$150,000	No	No
16	67	Yes	67	Yes	\$208,000	\$150,000	No	No
17	67	Yes	67	Yes	\$221,000	\$150,000	No	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 10 feet in height is acoustically feasible, however it does not meet the noise abatement design goal. A wall 11 feet in height is acoustically feasible, meets the noise abatement design goal, and is cost reasonable. Walls ranging in height from 12 to 17 feet are acoustically feasible and meet the noise abatement design goal, however they are not cost reasonable. Therefore, an 11-foot tall wall for Wall 16 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 17*Northern and Southern Option*

Wall 17 would be located on the east side of I-15. The wall would extend approximately 9,243 feet between 900 North and I-215 in North Salt Lake (see Noise Wall maps in Attachment D). This analysis assumes that the existing 10-foot to 16-foot walls would be removed from their current locations by the Action Alternative. Wall 17 was evaluated to mitigate noise for 980 impacted receivers (representing 983 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 25, walls ranging in height from 16 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 25: Summary of Wall 17 - Northern and Southern Option

Barrier Height	Feasible		Reasonable					Is Barrier Feasible & Reasonable?
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost	Cost Effective? ³	
16	94	Yes	84	Yes	\$2,921,740	\$18,284,588	Yes	Yes
17	95	Yes	88	Yes	\$3,100,584	\$19,814,588	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 16 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 16-foot tall wall for Wall 17 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable. This wall includes an extension to the north and south of the existing noise wall termini and would include a portion of wall where there is currently a gap in the existing walls near Center Street.

Wall 18*Northern Option*

Wall 18 would be located on the west side of I-15. The wall would extend approximately 1,726 feet between 1500 North and 1050 North in Salt Lake City (see Noise Wall maps in Attachment D).

This analysis assumes that portions of the two existing 12-foot walls would be removed from their current locations by the Action Alternative. Wall 18 was evaluated to mitigate noise for 73 impacted receivers (representing 73 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 26, walls ranging in height from 12 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 26: Summary of Wall 18 - Northern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
12	70	Yes	58	Yes	\$414,147	\$1,179,637	Yes	Yes
13	73	Yes	58	Yes	\$448,659	\$1,179,637	Yes	Yes
14	73	Yes	63	Yes	\$483,171	\$1,179,637	Yes	Yes
15	73	Yes	63	Yes	\$517,683	\$1,209,637	Yes	Yes
16	73	Yes	63	Yes	\$552,196	\$1,239,637	Yes	Yes
17	73	Yes	63	Yes	\$586,708	\$1,299,637	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 12 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 12-foot tall wall for Wall 18 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Southern Option

Wall 18 would be located on the west side of I-15. The wall would extend approximately 1,372 feet between 1500 North and 1050 North in Salt Lake City (see Noise Wall maps in Attachment D).

This analysis assumes that portions of the two existing 12-foot walls would be removed from their current locations by the Action Alternative. Wall 18 was evaluated to mitigate noise for 73 impacted receivers (representing 73 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 27, walls ranging in height from 12 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 27: Summary of Wall 18 - Southern Option

Barrier Height	Feasible		Reasonable					Is Barrier Feasible & Reasonable?
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost	Cost Effective? ³	
12	68	Yes	53	Yes	\$329,205	\$999,637	Yes	Yes
13	70	Yes	53	Yes	\$356,639	\$1,029,637	Yes	Yes
14	70	Yes	53	Yes	\$384,073	\$1,059,637	Yes	Yes
15	70	Yes	55	Yes	\$411,507	\$1,059,637	Yes	Yes
16	70	Yes	55	Yes	\$438,940	\$1,059,637	Yes	Yes
17	70	Yes	55	Yes	\$466,374	\$1,059,637	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 12 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 12-foot tall wall for Wall 18 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 19*Northern Option*

Wall 19 would be located on the west side of I-15. The wall would extend approximately 3,282 feet between 1100 North and 600 North in Salt Lake City (see Noise Wall maps in Attachment D). This analysis assumes that a portion of the existing 16-foot wall would be removed from its current location by the Action Alternative. Wall 19 was evaluated to mitigate noise for 236 impacted receivers (representing 236 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 28, walls ranging in height from 16 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 28: Summary of Wall 19 - Northern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
16	95	Yes	95	Yes	\$1,050,240	\$5,160,000	Yes	Yes
17	95	Yes	95	Yes	\$1,115,880	\$5,730,000	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 16 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 16-foot tall wall for Wall 19 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Southern Option

Wall 19 would be located on the west side of I-15. The wall would extend approximately 4,442 feet between 1200 North and 600 North in Salt Lake City (see Noise Wall maps in Attachment D). This analysis assumes that a portion of the existing 16-foot wall would be removed from its current location by the Action Alternative. Wall 19 was evaluated to mitigate noise for 239 impacted receivers (representing 239 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 29, walls ranging in height from 16 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 29: Summary of Wall 19 - Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
16	95	Yes	95	Yes	\$1,406,772	\$7,830,000	Yes	Yes
17	95	Yes	95	Yes	\$1,493,175	\$8,130,000	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 16 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 16-foot tall wall for Wall 19 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 20*Northern and Southern Option*

Wall 20 would be located on the west side of I-15. The wall would extend approximately 4,250 feet between 600 North and South Temple in Salt Lake City (see Noise Wall maps in Attachment D). This analysis assumes that the existing 10-foot to 14-foot walls would be removed from their current locations by the Action Alternative. Wall 20 was evaluated to mitigate noise for 424 impacted receivers (representing 424 receptors or dwelling units) on the west side of I-15 (see Attachment C for impacted locations). As summarized in Table 30, walls ranging in height from 14 to 17 feet were evaluated (see Attachment E for detailed barrier analyses).

Table 30: Summary of Wall 20 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
14	91	Yes	64	Yes	\$1,142,112	\$5,291,941	Yes	Yes
15	91	Yes	69	Yes	\$1,215,120	\$5,681,941	Yes	Yes
16	91	Yes	69	Yes	\$1,288,127	\$6,341,941	Yes	Yes
17	91	Yes	71	Yes	\$1,361,134	\$7,001,941	Yes	Yes

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

Walls ranging in height from 14 to 17 feet are acoustically feasible, meet the noise abatement design goal, and are cost reasonable. Therefore, a 14-foot tall wall for Wall 20 is recommended for balloting because it is the shortest wall height found to be both feasible and reasonable.

Wall 21*Northern and Southern Option*

Wall 21 would be located on the east side of I-15. The wall would extend approximately 4,524 feet between 600 North and South Temple in Salt Lake City (see Noise Wall maps in Attachment D). This analysis assumes that the existing 10-foot to 14-foot walls would be removed from their current locations by the Action Alternative. Wall 21 was evaluated to mitigate noise for 404 impacted receivers (representing 404 receptors or dwelling units) on the east side of I-15 (see Attachment C for impacted locations). As summarized in Table 31, a wall 17 feet in height was evaluated (see Attachment E for detailed barrier analyses).

Table 31: Summary of Wall 21 - Northern and Southern Option

Barrier Height	Feasible		Reasonable				Is Barrier Feasible & Reasonable?	
	% front-row with 5 dBA reduction	Acoustically feasible? ¹	% front-row with 7 dBA reduction	Noise Abatement Design Goal? ²	Anticipated Cost	Allowable Cost		Cost Effective? ³
17	64	Yes	12	No	N/A	N/A	N/A	No

¹ 5 dBA reduction for at least 50% of front-row receptors

² 7 dBA for at least 35% of front-row receptors

³ Anticipated cost is less than allowable cost

A wall 17 feet tall is acoustically feasible, however it does not meet the noise abatement design goal. Therefore, a 14-foot tall wall for Wall 21 is recommended to be replaced “in-kind”, consistent with the UDOT Noise Abatement Policy and to ensure that the replacement wall is at least equal to the height of the existing noise wall.

5.0 CONSTRUCTION IMPACTS

Construction noise impacts are considered temporary and will be minimized through adherence to UDOT Special Provision 01355M (Environmental Compliance) and Special Provision 0055 (Prosecution and Progress). Extended disruption of normal activities is not anticipated, since no receptors are expected to be exposed to construction noise for a long duration of time.

6.0 INFORMATION FOR LOCAL OFFICIALS

According to the UDOT Noise Abatement Policy, an estimated distance from the edge of pavement to where the worst hour $L_{eq}(h)$ levels of 66 dBA and 71 dBA occur must be provided to local governments for land uses with Activity Category G.

However, there are no tracts of undeveloped land within the study area.

7.0 CONCLUSION

Overall, noise levels for the Northern and Southern Options would range from 47 dBA to 86 dBA (see the Build Noise Impacts maps in Attachment C). Of the 5,219 receivers, 3,284 would be impacted under the Northern Option and 3,280 would be impacted under the Southern Option (see the Build Noise Impacts maps in Attachment C). Mitigation associated with the Northern Option and Southern Option would provide a benefit (at least a 5 dBA reduction in noise) for 1,766 and 1,842 receivers, respectively. Twenty-one noise walls were evaluated to mitigate traffic noise impacts to impacted receptors. Three noise walls will be replaced in-kind consistent with the UDOT Noise Abatement Policy. Thirteen noise walls are recommended and subject to final design and balloting (see Table 32). UDOT will conduct balloting consistent with the procedures described in the UDOT Noise Abatement Policy.

7.1 Summary of Evaluated Walls

Table 32 summarizes the evaluated walls for the Action Alternative.

Table 32: Action Alternative Evaluated Walls

Wall	Length (feet)*	Minimum Height (feet)*	Determination
1	–	–	Not Feasible; Not Recommended
2	1,651/1,704	16/10	Feasible and Reasonable; Recommended
3	–	–	Not Feasible; Not Recommended
4	4,199	16	Feasible and Reasonable; Recommended
5	12,345	17	Feasible and Reasonable; Recommended
6	4,481	16	Replace in-Kind
7	986	13	Replace in-Kind
8	–	–	Not Reasonable; Not Recommended
9	–	–	Not Reasonable; Not Recommended
10	3,381	13	Feasible and Reasonable; Recommended
11	1,880	14	Feasible and Reasonable; Recommended
12	4,343	12	Feasible and Reasonable; Recommended
13	1,370	14	Feasible and Reasonable; Recommended
14	1,557	15	Feasible and Reasonable; Recommended
15	–	–	Not Reasonable; Not Recommended
16	650	11	Feasible and Reasonable; Recommended
17	9,243	16	Feasible and Reasonable; Recommended
18	1,726/1,372	12	Feasible and Reasonable; Recommended
19	3,282/4,442	16	Feasible and Reasonable; Recommended
20	4,250	14	Feasible and Reasonable; Recommended
21	4,524	14	Replace in-Kind

* A single number indicates the same length or height under the Northern and Southern Options. Two numbers indicate differences in length or height between the Northern and Southern Options, respectively.

* Proposed Action noise level not applicable due to total acquisition of the parcel.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

* Proposed Action noise level not applicable due to total acquisition of the parcel.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

¹ Receptors with a D suffix represent the interiors of structures. Masonry buildings with double-glazed glass windows generally provide a noise reduction of approximately 25-35 dBA. Therefore, the interior noise levels for these buildings were estimated to be 25-35 dBA less than the exterior noise levels calculated by TNM.

Wall 5 - Northern and Southern Option

Receptor Name	No. of DU	Activity Category	1st Row Receptor	Wall Height (ft) Noise Reduction Values (dBA)
				17
			Total Wall Length:	12,345
			Length of Activity Category A/C/D/E Land Use:	1,655
			Length of Safety Barrier	0
			Wall Cost per sq ft:	\$20
			Cost of items critical to safety (snow storage):	\$0
			Cost of items critical to safety (safety barrier):	\$0
			No. of 1st row receptors:	98

Feasibility Factors

No. of 1st row 5 dBA reduction:	96
% of 1st row 5 dBA reduction:	98%
Acoustic Feasibility (5 dBA reduction for 50% of 1st row):	Yes

Reasonableness Factors

No. of 1st row Design Goal:	89
% of 1st row Design Goal:	91%
Noise Abatement Design Goal (7 dBA reduction for 35% of 1st row):	Yes

Cost Analysis

No. of Benefited (Category B):	237
Cost of Noise Wall (L x H x \$/sq ft):	\$4,197,300
Cost of item critical to safety (snow storage):	\$0
Cost of item critical to safety (safety barrier):	\$0
Anticipated Cost of Noise Abatement:	\$4,197,300
Activity Category B Allowable Cost (\$30k/benefited receptor):	\$7,110,000
Activity Category A/C/D/E Allowable Cost (\$360/linear ft):	\$595,800
Total Allowable Cost:	\$7,705,800
Allowable - Anticipated Cost:	\$3,508,500
Cost Effective (Anticipated < Allowable):	Yes

Feasible and Reasonable: Yes

Cost of Noise Wall (Length x Height x \$20 per sq ft):	\$465,800	\$438,400	\$411,000	\$383,600
Cost of any other items critical to safety:	0	0	0	0
Anticipated Cost of Noise Abatement:	\$465,800	\$438,400	\$411,000	\$383,600
Allowable Cost (\$30,000 per benefited receptor):	\$630,000	\$630,000	\$600,000	\$570,000
Cost Effective (Anticipated Cost < Allowable Cost):	Yes	Yes	Yes	Yes

Feasible and Reasonable:

Yes	Yes	Yes	Yes
-----	-----	-----	-----

Wall 14 - Northern and Southern Option

Per UDOT policy: [B] Allowable Cost of NAC C/D portion of barrier is determined per Linear Foot and Allowable Cost for non-NAC C/D area is determined per Benefited Receptor

[C] Benefited Receptors in "Per Linear Foot" Allowable Cost Portion are NOT also included as "Benefited Receptors" in the "Per Benefited Receptors" Allowable Cost Calculation (no double-counting)

Wall Height:	17 ft	16 ft	15 ft	14 ft
Wall Length (per Benefited Receptors Allowable Cost Portion):	0 ft	0 ft	0 ft	0 ft
Wall Length (per Linear Foot Allowable Cost Portion):	1,557 ft	1,557 ft	1,557 ft	1,557 ft
Total Wall Length:	1,557 ft	1,557 ft	1,557 ft	1,557 ft
Wall Cost per sq ft:	\$20

Feasibility Factors:

of First-Row >=5 dBA Reduction: 10

% of First-Row >=5 dBA Reduction: 56%

Acoustic Feasibility (>=5 dBA reduction for >=50% of front-row): Yes

Reasonableness Factors:

of First-Row Design Goal >=7 dBA Reduction: 3

% of First-Row Design Goal >=7 dBA Reduction: 17%

Noise Abatement Design Goal (>=7dBA reduction for >=35% of front-row): No

of Benefited: 10

Cost of Noise Wall (Length x Height x \$20 per sq ft): \$212,840

Cost of any other items critical to safety: 0

Anticipated Cost of Noise Abatement: \$212,840

Allowable Cost (\$30,000 per benefited receptor): \$300,000

Cost Effective (Anticipated Cost < Allowable Cost): Yes

Feasible and Reasonable: No

Wall 17 - Northern and Southern Option

Per UDOT policy: [A] On-Structure portion of barrier is restricted to 10-foot max height and On-Ground portion of barrier can differ from height of On-Structure portion, [B] Allowable Cost of NAC C/D portion of barrier is determined per Linear Foot and Allowable Cost for non-NAC C/D area is determined per Benefited Receptor

[B] Allowable Cost of NAC C/D portion of barrier is determined per Linear Foot and Allowable Cost for non-NAC C/D area is determined per Benefited Receptor

[C] Benefited Receptors in "Per Linear Foot" Allowable Cost Portion are NOT also included as "Benefited Receptors" in the "Per Benefited Receptors" Allowable Cost Calculation (no double-counting)

Wall Height (On-Ground Portion):

Wall Height (On-Structure Portion):

Wall Length (On-Ground Portion):

Wall Length (On-Structure Portion):

Total Wall Length

Wall Cost per sq ft: \$20

Cost of Items critical to safety:

Wall Length (per Benefited Receptors Allowable Cost Portion):

Wall Length (per Linear Foot Allowable Cost Portion):

Total Wall Length:

of First-Row Receivers: 121

Feasibility Factors:

# of First-Row >=5 dBA Reduction:	115	114
% of First-Row >=5 dBA Reduction:	95%	94%
Acoustic Feasibility (>=5 dBA reduction for >=50% of front-row):	Yes	Yes

Reasonableness Factors:

# of First-Row Design Goal >=7 dBA Reduction:	106	102
% of First-Row Design Goal >=7 dBA Reduction:	88%	84%
Noise Abatement Design Goal (>=7dBA reduction for >=35% of front-row):	Yes	Yes

# of Benefited (per Benefited Receptors Allowable Cost Portion):	641	590
# of Benefited (per Linear Foot Allowable Cost Portion):	36	36
Total # of Benefited:	TRUE 677	TRUE 626
Cost of Noise Wall (Length x Height x \$20 per sq ft):	\$3,100,584	\$2,921,740
Cost of any other items critical to safety:	0	0
Anticipated Cost of Noise Abatement:	\$3,100,584	\$2,921,740
Allowable Cost (\$30,000 per Benefited Receptor):	\$19,230,000	\$17,700,000
Allowable Cost (\$360 per Linear Foot):	\$584,588	\$584,588
Total Allowable Cost:	\$19,814,588	\$18,284,588
Cost Effective (Anticipated Cost < Allowable Cost):	Yes	Yes
Feasible and Reasonable:	Yes	Yes

Wall 19 - Northern Option

****Contains a portion of Existing Noise Wall (16 ft height) that will Remain-In-Place. Full wall length (Remain-In-Place & Proposed) are analyzed together as one wall however, the Height & Length of only the Proposed portion are used to determine Noise Wall Cost**

ANALYSIS OF FULL WALL LENGTH AT (REMAIN-IN-PLACE PORTION = 16 FT HEIGHT, PROPOSED PORTION = MULTIPLE HEIGHTS)

Wall Height:
 Wall Length:
 Wall Cost per sq ft: \$20
 Cost of items critical to safety:
 # of First-Row Receivers: 21

Feasibility Factors:

# of First-Row >=5 dBA Reduction:	20	20
% of First-Row >=5 dBA Reduction:	95%	95%
Acoustic Feasibility (>=5 dBA reduction for >=50% of front-row):	Yes	Yes

Reasonableness Factors:

# of First-Row Design Goal >=7 dBA Reduction:	20	20
% of First-Row Design Goal >=7 dBA Reduction:	95%	95%
Noise Abatement Design Goal (>=7dBA reduction for >=35% of front-row):	Yes	Yes

# of Benefited:	191	172
Cost of Noise Wall (Length x Height x \$20 per sq ft):	\$1,115,880	\$1,050,240
Cost of any other items critical to safety:	0	0
Anticipated Cost of Noise Abatement:	\$1,115,880	\$1,050,240
Allowable Cost (\$30,000 per benefited receptor):	\$5,730,000	\$5,160,000
Cost Effective (Anticipated Cost < Allowable Cost):	Yes	Yes

Feasible and Reasonable:

Yes	Yes
-----	-----

Wall 19 - Southern Option

per UDOT policy: [A] On-Structure portion of barrier is restricted to 10-foot max height and On-Ground portion of barrier can differ from height of On-Structure portion)

ANALYSIS OF FULL WALL LENGTH AT (REMAIN-IN-PLACE PORTION = 16 FT HEIGHT, PROPOSED PORTION = MULTIPLE HEIGHTS)

Wall Height (On-Ground Portion):
 Wall Height (On-Structure Portion):
 Wall Length (On-Ground Portion):
 Wall Length (On-Structure Portion):

Total Wall Length
 Wall Cost per sq ft: \$20
 Cost of Items critical to safety:
 # of First-Row Receivers: 21

Feasibility Factors:

# of First-Row >=5 dBA Reduction:	37
% of First-Row >=5 dBA Reduction:	64%
Acoustic Feasibility (>=5 dBA reduction for >=50% of front-row):	Yes

Reasonableness Factors:

# of First-Row Design Goal >=7 dBA Reduction:	7
% of First-Row Design Goal >=7 dBA Reduction:	12%
Noise Abatement Design Goal (>=7dBA reduction for >=35% of front-row):	No

# of Benefited:	385
Cost of Noise Wall (Length x Height x \$20 per sq ft):	\$1,458,529
Cost of any other items critical to safety:	0
Anticipated Cost of Noise Abatement:	\$1,458,529
Allowable Cost (\$30,000 per benefited receptor):	\$11,550,000
Cost Effective (Anticipated Cost < Allowable Cost):	Yes

Feasible and Reasonable:

No
